Less talk, more BUIDL

With the advent of Binance chain, we see endless possibilities to build a decentralised future. We call upon the mighty Indian Startup and Developer community to leverage the Binance Smart Chain and build useful and innovative blockchain solutions.

"Distributed,

Decentralized
and Disruptive"

Tracks

Payments

Mobile and digital payments solutions have become a norm in many countries globally, significantly reducing reliance on cash. However, challenges and issues around financial inclusion and adoption are still prevalent. Blockchains offer unique infrastructure to address a number of these challenges.

Design and create a more inclusive and frictionless payments solution. Use cases could include peer-to-peer payments, merchant payments, or payment sharing.

Micro asset economy use cases with MiniTokens (BEP-8)

MiniTokens (BEP-8) enable experimentation of a broad range of use cases by significantly reducing the cost and resource requirements for developing token use cases. These can include IP licensing, loyalty points, micro-utility tokens, and community points.

Bridging DeFi with real world assets

Decentralized Finance (DeFi) aims to create a new financial infrastructure built on blockchains that is more equitable and accessible to everyone. Instead of having to trust and depend on legacy centralized financial institutions and financial service providers, consumers can access financial services through automated decentralized financial applications without having to rely on a central party or intermediaries. Collateralizing real world assets in DeFi applications will enable a new wave of innovation in the space. Conceptualize and design a DeFi application that uses real world assets.

Blockchain Datasets and Analytics

Collect Binance Chain and Binance Smart Chain data to Google Datasets and build Analytics reports or AI.
